

Clearpack is with YOU in this Fight Against COVID-19

With the situation developing around the COVID-19, our focus is on the safety and well-being of our employees, customers, vendors and all stake holders involved. We are diligently following the guidance of local Public Health authorities and other relevant Government agencies in all the countries we operate in. With the introduction of Lockdowns and Movement restrictions in many countries and regions, our Business Continuity Plan kicked in.

Our staff functions (Management, Sales, Finance, Design, Engineering, Project management, Procurement, HR etc) are working from home, even in countries where restrictions are partial to support Social Distancing measures. Where government rules allow, our manufacturing activities go on after taking all necessary precautions for the safety of our teams and other stakeholders.

We want to minimize service disruptions to our Clients hence our Service teams are supporting via Phone, Email, Augmented Reality using Smart glasses. In some countries, where its allowed, our service teams continue to support our Clients on site. We are prioritizing Services to Clients in Essential goods space (Food, Pharma, Healthcare, Home and Personal care). Our goal is to continue offer a high level of support and responsiveness.

We regret for any inconvenience this may cause and look forward to your continued support during this difficult or rather un-avoidable situation that calls for such measures. Please feel free to contact our team should you have any questions or concerns; you can also email us at info@clearpack.com

Our management is continuously engaged and evaluating the situation to take needed actions. We would update this space as and when there are some changes.

We are also pleased to share that given the utter shortage of Ventilators in most countries, our Design and manufacturing teams have taken up the challenge to contribute to improve the situation. We have come up with a “Low cost Respirator” design and first Prototype in short duration of 5-6 days after taking necessary permissions to partial work in our factory in India to manufacture parts and assemble the prototype. We are now in testing phase and would go through the necessary validation and approvals and hopefully it can be useful to the hospitals for the critical care they need to provide to their patients. A picture of the prototype can be seen here.

We shall overcome this Covid 19 challenge together! Thank you for you continued partnership and support. Stay safe and Healthy

3 Prototypes. Middle one is the latest
